

Foundation Progress — Portfolio Sitemap & AI Tutor Setup

AI/ML Portfolio Development Strategy

Proof statement: I build practical AI/ML and data-driven solutions that turn real-world problems into useful, deployable products.

One desired action: Encourage recruiters or hiring managers to review evidence of my work and contact me about a relevant internship, job, or project opportunity.

1. Portfolio Sitemap

A focused sitemap built around the proof statement, evidence of work, and one clear contact action.

2. Claude Project & Custom Instructions

Claude Project configured as an ongoing tutor and critical-thinking partner, with the portfolio proof statement and target audience included.

You are my tutor and critical thinking partner for my personal portfolio build.
My proof statement:
"I build practical AI/ML and data-driven solutions that turn real-world problems into useful, deployable products."
My target audience:
Recruiters and hiring managers looking for early-career AI/ML, Data Science, and related technical talent.
My one desired action:
I want visitors to review my work and contact me about an internship, job, or

Identified misalignment between proof statement and UI/UX strengths, flagged conflicting career targets

Good — this is a proper brief, and I'll hold you to the three-test framework every time you propose something. Let's stress-test the foundation first, because if the proof statement is off, everything built on it wobbles.

Problem 1: Your proof statement doesn't match your actual edge.

You've got 6+ years of freelance UI/UX and 2+ years full-stack, on top of the AI/ML stuff. Your proof statement — "I build practical AI/ML and data-driven solutions that turn real-world problems into useful, deployable products" — could've been written by any bootcamp grad with three Kaggle notebooks. It says nothing that only you could say.

3. Sitemap Pressure-Test Prompt & Initial Output

A real prompt was used to pressure-test the sitemap against the proof statement and desired action.

I have created a minimal sitemap for my personal portfolio:

Home / Hero

↓

Featured Work / Case Studies

↓

About + Skills

↓

Contact / CTA

My proof statement is:

Identified contact mechanism gap as critical weakness needing immediate resolution

Good — that's a real decision, and it's correct: skills without evidence attached are just a word cloud recruiters skim past. Folding them into About and case studies forces every skill claim to point at proof. Keep it. But be clear-eyed: that wasn't a weakness I'd flagged — I never proposed a Skills page. So this is a good call, not yet a fix to the actual problems sitting in this sitemap.

Here's the pressure test, section by section:

4. Pressure-Test Analysis

Claude evaluated whether each section earns its place and identified weaknesses in the path toward the intended action.

Identified contact mechanism gap as critical weakness needing immediate resolution

Good — that's a real decision, and it's correct: skills without evidence attached are just a word cloud recruiters skim past. Folding them into About and case studies forces every skill claim to point at proof. Keep it. But be clear-eyed: that wasn't a weakness I'd flagged — I never proposed a Skills page. So this is a good call, not yet a fix to the actual problems sitting in this sitemap.

Here's the pressure test, section by section:

Home / Hero

1. Earns its place — yes, mandatory.
2. Proves the claim only if the hero line is a sharpened version of your proof statement, not a restatement of it. Right now you have one proof statement and it's generic. This section can't prove more than what you feed it.
3. Missing: a visible CTA at this level. If Contact is only reachable at the bottom of a linear scroll, Home isn't doing its conversion job.
4. Moves toward action — partially. Needs a direct path, not just a promise of one further down.

Featured Work / Case Studies

1. Conditionally earns its place — flag: you wrote "Case Studies" plural again. We already

5. Change I'll Make

I'll add a clear and visible CTA directly in the Hero section, giving recruiters an immediate path to contact me instead of requiring them to scroll to the bottom.

Reason: The pressure test identified that the Home/Hero only partially moves the visitor toward the intended action when the contact path is available only later in the page. A visible CTA in the Hero makes the next step immediate and clear.
