

Foundation Progress — Proof Statement

Proof Statement

I build complete AI-powered applications — real data pipelines, application logic, and usable interfaces around the model, not just an API call — so hiring managers looking for entry-level AI Engineers can see production-shaped thinking, not tutorial-shaped thinking, and invite me to interview.

Why This Needs to Exist

My CV and LinkedIn can list what I've built, but they can't prove that I can turn AI into a complete working system rather than just an API wrapper.

AI Thinking-Partner Evidence

Claude was used to pressure-test and narrow the claim, audience, and action.

1. Claim: What I want to prove is that I can build AI applications beyond simple API wrappers by integrating AI into complete working systems with real application logic, data handling, and usable interfaces. My projects are the evidence of this.
2. Person: I want to position myself specifically for AI Application / Applied AI roles rather than claiming deep expertise in traditional ML research or model development.
3. Action: I want an Applied AI Engineer or AI Engineer hiring manager to review my work and invite me to an interview for an entry-level AI Engineer role. Now help me narrow this into ONE honest primary claim, ONE specific person, and ONE action. Give me only the final one-paragraph proof statement and one-line "why." Keep it concise.

Distilled positioning strategy into focused, actionable components

Proof statement: I build complete AI-powered applications — real data pipelines, application logic, and usable interfaces around the model, not just an API call — so hiring managers looking for entry-level AI Engineers can see production-shaped thinking, not tutorial-shaped thinking, and invite me to interview.

Why: It names the specific gap (system vs. wrapper) that your actual evidence (IntelliPlant's pipeline) can prove — nothing here is a claim, ↓ work can't back up.

One thing to flag: not finished yet, this statement is only a strategy, not a "fact". Please double-check
